- ✓ Size DN15…DN40
- ✓ Nominal flow 0.6…10 m³/h
- ✓ For horizontal or vertical mounting
- ✓ Compact meter with easy-to-read display
- ✓ No moving parts enable flow measurement at low pressure drops
- ✓ Back flow detection
- ✓ Available with M-Bus, pulse output or M-Bus and 2 pulse inputs
- ✓ 230 V power pack available as accessory

Function

The menu system, available in the display, makes it possible to read a large number of parameters, such as heat and cold consumption, total energy spent on heating and cooling, temperatures along with current energy consumption.

Installation is normally in the return pipe.

Connection

The energy meter comes equipped with two PT1000 temperature sensors. The resistors for the sensors are composed of platinum and maintain a standard of DIN IEC 60751.

The return temperature sensor is integrated into the flow meter while the supply temperature sensor is connected via a cable.

Mounting

The temperature sensor can be mounted directly in the media or in sensor pockets. The compact design of the energy meter allows it to be mounted even in narrow spaces.

More installation accessories are also available such as ball valves with installation point for a temperature sensor or pipe connection kits etc. See more under the heading ***Accessories***.

High reliability

The meter offers reliable and accurate performance over long periods of measurement.

Flexible design

Due to the multiple combination options offered by its components, the meters can easily be adapted to suit a large number of individual requirements.

Models with M-Bus, pulse output or M-Bus + pulse input are available.

Energy meters with M-Bus have a default address of "0", which is not a valid primary communication address. This primary address can be changed by searching for secondary addresses (i.e. the ID number of the meter).
